

Computer Science Streams

- Lessons:

- o **Computer Science** a field that focuses on computers .

Computer This term collectively refers to many computer-centered fields such as computer hardware, software, computer applications, and fundamentals of computing.

Its subsidiary words can be divided into various

categories. o and practical fields

Mathematics is a branch of

science that arose due to the needs of man for calculation

in business, in knowing the relationship between

numbers, in measuring land, in predicting

cosmic events. These four requirements reflect the

following four major mathematical categories: o **Physics** is

a branch of physical philosophy and physical science that

deals with matter and its movement through space

and time and related principles like energy and force etc.

Broadly speaking, general analysis is conducted in

nature to understand how the cluster behaves.

is

- o **Chemistry** is made up of atoms

That is, it is a scientific field that studies the compounds

formed by elements and molecules. In general, the

correlation of atoms becomes important here. All the news

about their nature, structure and resulting properties

are in this room

will be investigated. Here it is explained that atoms and molecules form chemical bonds.

- o Apart from this, **Tamil and English** subjects.

- o Different Groups:

- Physics, Chemistry, Computer Science,

- Mathematics, Tamil,

- English. • Physics, Chemistry, Biology,

- Computer Science, Tamil, English.

- Apart from this, there are various groups in business groups.
